

CONTEKcompliancePLUS

Isn't KNOWLEDGE More Than POWER?

In the complex world of regulatory EHS compliance, yesterday's methods will not give you the assurance you need to meet tomorrow's requirements. The stakes have never been higher, and it is your job to help mitigate your organization's exposure to risk.

Take a look at your current programs and ask the following:

- Do you track the critical EHS and operations data from your field sites so you can measure the performance of your policies and programs?
- Do you know if scheduled regulatory compliance inspections are being completed accurately and on time?
- Do you know if your field workers are performing scheduled checks and inspections to ensure your company is audit-ready?
- Are your company's environmental and safety incidents reported and investigated thoroughly and in a timely fashion?
- Can you ensure all corrective actions are being addressed with the appropriate follow-up and closure?
- Can you examine your data, see trends, and take action accordingly?

Wouldn't you say then, that where regulatory EHS compliance is concerned, knowledge is more than power? Wouldn't you agree that knowledge is critical?

You need access to real-time and accurate data from your field operations to ensure your regulatory and EHS programs are implemented effectively. You need it to mitigate your organization's exposure to risk.

You need **CONTEKcompliancePLUS**.

CONTEK SOLUTIONS EXPERTISE

Manage Your Exposure to RISK – The CONTEKcompliancePLUS Solution

The CONTEKcompliancePLUS solution is an integrated suite of web-based tools that provides you with a direct line-of-site into your field operations, enabling your organization to operate safely, responsibly, and efficiently. Easily scalable, it provides you with the knowledge to make informed, mission-critical decisions for your organization.

Your legacy electronic and hard copy data and systems can easily be integrated into the CONTEKcompliancePLUS during the seamless implementation process. Upon implementation, previously inaccessible data, reports, and information are available to you 24/7 from anywhere you have internet access.

The POWER of a Bundled SOLUTION

The **CONTEKcompliancePLUS** solution suite consists of **three** robust tools tailored to your company's EHS management needs.

1

CONTEK PSM Module –

provides a full range of services within a QHSE data management system assuring that your critical operations comply with OSHA's Process Safety Management (PSM) requirements. This tool enables you to generate status and performance reporting, track PSM requirements, and meet critical compliance deadlines.

What You Achieve:

- Simplified regulatory compliance
- Centralized and organized data relating to all 14 PSM elements
- Effective proactive PSM and Safety management by:
 - Ensuring recurring operations events follow all PSM requirements
 - Reviewing data and monitoring trends
 - Managing preventive measures
- Effective reactive PSM and Safety management by:
 - Identifying issues, events, and incidents in real-time
 - Investigating incidents and inspecting operations
 - Addressing immediate causes and root causes of adverse events
 - Facilitating management of corrective action and follow-up
- Enhanced progress reports
- Improved document control
- Automated management processes
- Lower workers' compensation costs
- Lower accident rates

2

CONTEK Environmental Compliance Module –

enables total compliance with complex local, state, and federal environmental regulations while integrating management system standards and industry-best practices. From the field to the executive suite, this tool helps to gather, input, store, monitor, manage, and communicate facility, operating unit, or enterprise performance information.

What You Achieve:

- Improved management of environmental issues that put your business at risk
- Avoidance of health and safety incidents that threaten your people and company
- Simplified environmental data management
- Improved measurement capabilities
- More efficient regulatory compliance management

3

Contek Integrity Management Module –

ensures all technical changes to operations and processes are properly reviewed and that the hazards introduced are identified, analyzed, and controlled prior to resuming operation. This tool reduces the time required for processing modifications, tracking approvals, and management of technical change activities. You will be able to efficiently and effectively manage information and maintain constant control and

What You Achieve:

- Streamlined corporate policies, work flow, and reporting processes
- Improved document control
- Improved communication flow through email notification of scheduled events
- Enhanced compliance with industry design standards
- Efficient management of operations and vessels data
- Effective Management of Change (MOC) process
